

CONTOUR

Real Estate Management & Business Intelligence Platform

Contour is a real estate management and business intelligence platform designed to help real estate companies, property consultancies, and property businesses manage their listings, clients, agents, transactions, and business activity from one connected system.

Contour is designed to automate, simplify, and shorten everyday processes, helping businesses save time, reduce administrative work, and make better decisions using the information generated by their business.

KEY FEATURES

1. WhatsApp Automation:

Contour can be connected to a WhatsApp API under the company's business account, allowing communication with clients and tenants to become part of the system.

It can be used to:

- Remind tenants when rent or payments are due.
- Notify potential clients automatically when a property they previously inquired about becomes available.
- Follow up with clients.
- Keep communication connected to the relevant client and property.
- Analyse client responses and communication to help management understand negotiations and customer interest.

2. Website Integration

Contour can be connected directly to the company's website.

When a property listing is added or updated in Contour, the information can automatically be reflected on the website.

This eliminates the need to update multiple systems with the same information and keeps property availability and information synchronized across platforms.

3. Live Property Map

Contour includes a map system that provides a visual overview of the company's property portfolio. Different colours can indicate the status of each property:

- Available for Sale
- Available for Rent
- Sold
- Rented

Field agents can also access the map and relevant property information while working in areas with limited or no internet connectivity, allowing them to continue accessing important property information and locations offline.

4. Cloud & Offline Document Storage

Property-related documents can be stored and organized within Contour, allowing authorized users to access them when needed.

The system can support cloud-based storage and offline access, helping ensure that important business records are not dependent on a single physical computer.

This also provides an additional layer of protection against situations such as computer damage or hardware failure.

5. Field Agent Connection

Each field agent has their own account connected to the main Contour system. Agents can access the information they need to perform their work, including:

- Available properties
- Property locations
- Property details
- Client inquiries
- Assigned clients
- Ongoing deals

Information entered or updated by agents is connected to the main system, allowing management to maintain visibility of activity across the business.

Access can also be limited according to the agent's role and responsibilities.

ADDITIONAL FEATURES

Rapid Listing Creation

Agents can quickly create new property listings by providing the necessary information and images. Contour can assist with preparing and publishing listings, allowing multiple properties to be added in a short period of time.

The goal is to make the listing process significantly faster and reduce repetitive data entry.

Automatic Business Reporting

Contour continuously collects information generated by the business, including:

- New listings
- Client inquiries
- Property visits
- Client communication
- Ongoing negotiations
- Stagnant deals
- Failed deals
- Successful sales and rentals
- Agent activity

This information can be used to generate detailed management reports based on the company's preferred reporting requirements.

Instead of management manually collecting information from different parts of the business, Contour brings the information together into a single report.

Lead & Traffic Source Tracking

Contour records where inquiries and potential clients come from.

For example:

- Website
- WhatsApp
- Instagram
- Facebook
- Referrals
- Walk-ins
- Other marketing channels

This allows management to understand which channels are generating the most interest and which channels may require improvement.

Over time, this can help the business make better marketing decisions based on actual data.

THE PURPOSE OF CONTOUR

Contour is designed to connect the different parts of a real estate business:

Listings → Clients → Inquiries → Agents → Negotiations → Sales/Rentals → Payments → Reports

The goal is to give management a complete view of the business, while giving agents the information and tools they need to perform their jobs efficiently.

Rather than having information spread across spreadsheets, WhatsApp conversations, physical documents, and separate platforms, Contour brings the information together into one connected system.

Experience Contour

The MVP is available to explore through the link below.
